جستجوی منابع الکترونیکی (مقدماتی و پیشرفته)

صغری گلمغانی

رئیس گروه اطلاع رسانی پزشکی و منابع علمی دانشگاه علوم پزشکی اردبیل

سرفصل

- آشنایی با عملگرهای بولی (AND, OR, NOT)
- آشنایی با کاراکترهای مهم در جستجو
- جستجو در پایگاه Scopus

مقدمه

- امروزه اینترنت یکی از مهمترین منابع اطلاعاتی به حساب می آید.
به منظو دستیابی به منابع مورد نیاز در اینترنت و کسب اطلاعات مفید
ما نیازمند آشنایی با ابزارها، تکنیک ها و شیوه های جستجو در
اینترنت می باشیم.

راهبردهای جستجو

به منظور ترکیب مفاهیم مختلف کلیدواژه ها یا گسترش و محدود کردن جستجو از راهبردهای متعدد استفاده می کنیم.

- اگر کلیدواژه انتخابی شما برای جستجو کفایت نمی کند، بهتر است از عملگرهای بولین (AND, OR, NOT) استفاده کنید.

استفاده از عملگرهای AND در جستجو

- عملگر AND زمانی مورد استفاده قرار می گیرد که درصدد محدود کردن نتیجه جستجو باشیم. وقتی این عملگر بین دو یا چند کلیدواژه قرار داده می شود به این معنا است که کاربر، از سیستم می خواهد فقط مدارکی را که تمامی کلیدواژه ها را دربرداشته و تاثیر یکی بر دیگری مورد بحث قرار گرفته است بازیابی شود به همین دلیل، نتیجه جستجو محدودتر می شود.

Child

Asthma

عملگر OR

- OR عملگر دیگری است که وارد کردن آن بین دو یا چند کلیدواژه به معنای گسترش حوزه جستجو است.
- وقتی این عملگر مورد استفاده قرار می گیرد به معنای این است که تمامی مدارکی که هر کدام از کلیدواژه ها در آنها آمده است بازیابی شود.

عملگر OR : نتایج را وسیع تر کرده و حداقل یکی از لغات را در بر می گیرد.

عملگر NOT

- عملگر NOT کمتر از بقیه مورد استفاده قرار می گیرد. از این عملگر زمانی استفاده می شود که قصد حذف کلید واژه ای را داشته باشیم.

عملگر NOT: کلمه بعد از NOT از فهرست نتایج حذف می شود.

ادامه راهبرد جستجو

- هم چنین شما می توانید NOT , OR , AND را در ساختار یک جستجو، با هم استفاده نمایید.

- وقتی از عملگرهای مختلف بولین در یک جستجو استفاده می شود باید از روشی به نام تودرتو استفاده گردد. بر این اساس کلیدواژه هایی را که می خواهید یکی از آنها هر بار بازیابی شوند در پرانتز قرار می دهید.

Iran AND (AIDS OR HIV)

جستجوی عبارتی

- جستجوی عبارتی شامل کلیدواژه هایی است که باید کنار یکدیگر بیایند. آنرا داخل گیومه " " قرار دهید، مانند "heart attack" الزاماً این دو واژه به صورت یک عبارت بازیابی خواهد شد.

جستجوی مجاورتی

- در بعضی از نظام های پیشرفته بازیابی اطلاعات، می توان فاصله بین کلمات را نیز تعیین نمود. این عمل جستجوی مجاورت نامیده می شود.

جستجوی میدانی

- جستجوی میدانی توانایی محدود کردن جستجو به فیلدی خاص است. به طور معمول فیلدهای مختلفی در سیستم های بازیابی اطلاعات در نظر گرفته می شوند که کاربر، با استفاده از این روش می تواند جستجوی خود را محدود نماید.

- توانایی محدود کردن جستجو به فیلدی معین مانند: عنوان، موضوع، چکیده و نویسنده، میزان ارتباط مدارک بازیابی شده را افزایش می دهد.

کاراکترهای مهم در جستجو

* این کاراکتر در کلیدواژه‌ی مورد جستجو، جایگزین یک یا چند حرف می‌شود و کلیدواژه را با املای گوناگون و نگارش‌های متفاوت آنها بازیابی می‌کند.

مثال : مثلاً برای بازیابی کلمات **woman,women** می‌توان این کلمه را به شکل **wom*n** تایپ کرد. علامت ستاره موجب می‌شود که هر دو حالت کلمه بازیابی شود.

*

کاراکترهای مهم در جستجو

- **؟ جایگزین یک کاراکتر می‌شود. مثال** Ard?bil
- **برای جستجوی کلیدواژه‌های بالانویس و زیرنویس آنها را در یک خط یکسان وارد کنید. مثل** H^{2O} **به صورت** H2O **وارد نمایید.**
- **Stop Words: کلماتی که قابل جستجو نیستند و نباید در جستجو از آنها استفاده کرد. مانند** a, an, the
- **برای جستجوی الفبای یونانی، کاراکتر انگلیسی آن را وارد نمایید. مانند** β **Beta به جای**

سایر امکانات جستجو

– ریشه سازی

– محدودیت زبانی

– نوع سند

– محدود کردن زمانی و ...

ریشه سازی

- **! با اضافه کردن این کاراکتر به پایان کلیدواژه یا کلیدواژه‌ها، تمام کلماتی که از لحاظ املائی ریشه‌ی یکسانی با کلیدواژه‌ی مربوطه دارند بازیابی می‌شوند. مثل Educate برای Education Educator, , Educative.**

محدودیت زبانی

برخی از سیستم های بازیابی اطلاعات، مدارکی را که به زبانهای مختلف تالیف شده است، نمایه می کنند.

محدودیت زبانی در واقع توانایی محدود کردن جستجو به زبان مورد نظر کاربر است.

محدودیت زمانی

یکی دیگر از ویژگی های مهم ابزارهای بازیابی اطلاعات، توانایی آنها در محدود کردن جستجو به زمانی خاص است. به این ترتیب کاربر هم می تواند جستجوی خود را دقیقا به زمانی خاص مثلا یک سال یا حتی یک ماه محدود کند و یا اینکه به دوره ای خاص که شامل چندین ماه یا سال است، محدود کند.

راهبردهای بهبود جستجو

– در نظر داشتن مترادف ها، اسامی علمی، اصطلاحات مرتبط (مش) و یا سایر کلید واژه های که می تواند جستجو را محدود و به باز یابی بهتر کمک کند.

– در نظر داشتن جستجو که ممکن است کاربرد داشته باشد، از قبیل کوتاه سازی، عملگر مجاورت، عملگرهای بولین و غیره

ادامه راهبردهای بهبود جستجو

– پایگاه اطلاعاتی متناسب با موضوع مورد نظر خود را انتخاب نمایید.

– روش جستجو در نظام مورد نظر خود را از طریق منوهای کمکی فرا
گیرید.

– مفاهیم مهم را در جستجوی خود تشخیص دهید.

– انتخاب کلیدواژه هایی که مفاهیم مورد نظر شما را تعریف می کنند.

ادامه راهبردهای بهبود جستجو

– کاراکترهای مشخص شده برای هر کدام از عملگرهای بولین را در هر یک از پایگاه اطلاعاتی مشخص و بر اساس آنها، جستجو را انجام دهید.

– ارزیابی مدارک بازیابی شده

– در صورت نیاز و عدم بازیابی مدارک مناسب، روش جستجوی خود را تغییر دهید.

– در صورت استفاده از یک بانک اطلاعاتی و عدم بازیابی مدارک مناسب، جستجو را در بانک اطلاعاتی دیگری تکرار نمایید.

ادامه راهبردهای جستجو

– اگر جستجوی شما نتایج کمی را بازیابی کرده است و شما آن را کافی نمی دانید، به نکات زیر توجه کنید:

– ممکن است در جستجو از کلیدواژه های بسیار خاصی استفاده کرده اید و یا تعداد کلیدواژه های زیادی به کار برده اید، بهتر است کلیدواژه های کم اهمیت را حذف نمایید.

ادامه راهبردهای بهبود جستجو

اگر جستجوی شما به بازایی نتایج بیشتری منجر شده است که به موضوع شما مربوط نیستند یا ربط اندکی دارند:

– جستجوی خود را به فیلد خاصی از جمله عنوان، موضوع و چکیده محدود نمایید.

– از کلیدواژه های خاص تر استفاده نمایید. خصوصا استفاده از اسامی تخصصی و علمی (مش)

پایگاه های اطلاعاتی انگلیسی

- Scopus
- PubMed
- Web of Science
- ScienceDirect
- EBSCO
- Embase
- Cochrane Library
- PubMed
- Clinical Key
- BMJ
- OVID
- ProQuest
-

- با توجه به توضیحات ارائه شده

- مراحل کاوش علمی عبارتند از :

سوال پژوهش، تعیین استراتژی جستجو، انتخاب پایگاه مورد نظر

تفاوت موتورهای جستجو با پایگاه داده ها

- موتورهای جستجوگر دارای نرم افزاری است که همواره صفحات اینترنتی را جستجو نموده و صفحات وب را یافته، به پایگاه داده خود اضافه می کنند. در واقع اتوماتیک وار صفحات وب، به پایگاه داده اضافه می شود. **مانند: Google**
- پایگاه داده : شامل مطالب خاصی است که توسط انسان انتخاب و نمایه می شوند. معمولاً پایگاه های اطلاعاتی مجموعه ای از مقالات مجلات، روزنامه ها، کتابها و منابع مرجع الکترونیکی است.
- **مانند: ScienceDirect, Scopus, Springer, Ovid و**

جستجو در بانک اطلاعاتی PubMed

معرفی

- PubMed یکی از محیط های جستجو و بازیابی منابع حوزه علوم پزشکی است که توسط کتابخانه ملی پزشکی آمریکا (NLM) تهیه شده است. که دسترسی به پایگاه اطلاعاتی (Medline) را بطور رایگان در اختیار کاربران قرار می دهد. در حال حاضر این پایگاه دارای بیش از ۳۰ میلیون مقاله، کتاب های آنلاین و ... می باشد
- پوشش زمانی این پایگاه از سال ۱۹۵۰ می باشد.

Prevalence and characteristics of Hymenoptera venom allergy in urban school children aged 6 to 18 years living in Trabzon

Özge Baba, GÜlay Kaya, Mehtap Haktanir Abul, NeŞe Kaklıkkaya, Murat Çakır, Fazıl Orhan

PMID: 33356030 DOI: 10.3906/sag-2009-86

Free article

Abstract

Background: Hymenoptera venom allergy is one of the leading causes of systemic allergic reactions in both adults and children. The present study was conducted to evaluate the prevalence and characteristics of Hymenoptera venom allergy in urban school children aged 6 to 18 years living in Trabzon.

Materials and methods: In this cross-sectional, two-level survey study, children were recruited using random sampling of public primary and secondary schools. First, parents were asked to inform their child's age and sex, whether their child had ever been stung by any kind of bee, and if yes, whether they would attend a face-to-face interview at the outpatient clinic for the second part of the survey, which included information about history of insect stings and the presence of atopic disease.

Results: Of 17000 children, 7904 (46.5%; 3718 males, 47.0%) returned the first-level questionnaire. A total of 4312 (54.5%) were stung at least once in their lifetime. Males had a significantly higher risk of being stung (59.4%, odds ratio: 1.44, 95% confidence interval: 1.32-1.57). The questionnaire was completed for 545 (12.6%) of the children. Of 950 : 5.2% were large local reactions (LLRs), 1.9% were generalized cutaneous reactions (SRs). The stinging insect was Apis mellifera and Vespa respectively (p<0.001).
